

Nama : saman supriadi
Program : intro to nodejs

- Create database : create database "h8";
- Delete database : drop database if exists "h8";
- Create table :

```
create table "Students"(  
    nim serial primary key,  
    nama varchar NOT NULL,  
    is_active boolean,  
    id_jurusan integer not null  
);
```

- Delete table

```
drop table if exists "Users";  
drop table if exists "Students_detail";  
drop table if exists "Students";
```

- Insert to table

```
insert into "Students" ("nama", "is_active", "id_jurusan") values  
( 'saman', true, 1),  
( 'senju', true, 2),  
( 'itachi', true, 3),  
( 'danzo', false, 3);
```

- Update data di table

```
update "Students" set "nama" = 'saman senju', "is_active" = false where "nama" = 'saman';
```
